FS 3-81  
December 1981

## WORLD SUGAR SUPPLY AND DISTRIBUTION 1956/57-1980/81

World production of sugar rose 3 percent in 1980/81 from the very poor output in 1979/80. Consumption was down again due largely to the high prices which prevailed early in the year.

The world stock level fell another 10 percent during the year, with the year-end total of 21.3 million tons representing about 24 percent of annual world requirements.

This circular supersedes Foreign Agricultural Circular, FS 3-80, November 1980. In addition to providing data for 1980/81, statistics for sugar supplies and distribution are revised for a number of countries. The data generally reflect information available in November 1981; the 1980/81 statistics are preliminary and are based on FAS's third estimate of that crop (October 1980).

The area data in this publication represent area harvested in thousands of hectares. Sugarcane area data for countries producing both centrifugal and non-centrifugal sugar show only the former.

Sugar statistics are on a raw value basis in 1,000 metric tons, except for yield, which is in tons. Three columns for utilization data are not used, but may be used in the future if a breakdown is made for different kinds of utilization.

The supply and distribution statistics are on a crop year basis, by country, with the years shown being the ending years. The crop year is generally September-August. Although sugar is one of the most universally produced agricultural commodities, some 50 countries (labeled "other importers") produce virtually no sugar. The USDA's semi-annual estimate of world production does not include an estimate for these countries.

(Note: Dashes in the tabular material indicate negligible, zero, or unavailable.)
